

Question 1: Insights into the Covid 19 pandemic

Pablo Rees^a

^aStellenbosch Economics Department

Abstract

Abstract to be written here. The abstract should not be too long and should provide the reader with a good understanding what you are writing about. Academic papers are not like novels where you keep the reader in suspense. To be effective in getting others to read your paper, be as open and concise about your findings here as possible. Ideally, upon reading your abstract, the reader should feel he / she must read your paper in entirety.

1. Introduction

The African experience of Covid 19 has been significantly different from that of the rest of the world.

The number of vaccines administered to Africa has been significantly lower than what the rest of the world received. This has been widely attributed to vaccine hoarding by richer countries as well as vaccine hesitancy prevalent amongst African communities.

Contributions:

The authors would like to thank the Kommetjie municipality for today's water outage. Thank you sincerely.

Total number of vaccinations delivered per hundred people

Notice Africa is significantly lower

Figure 1.1: Covid Vaccines.

The number of deaths relative to the number of cases is higher in Africa than it is in non-Africa, this is demonstrated in the graphs below.

New deaths and cases in and out of Africa

Notice Africa's deaths stray further above the cases line than in non-Africa
